DETAILED ACTION

Allowable Subject Matter

1. Claims 1 and 3 are allowed.
2. The following is an Examiner's statement of reasons for allowance.

The closest prior art record Kobayashi (US Pub No. 2002/0114060) teaches WDM optical transmission system with optical supervisory signals, APSD and clock signal but the prior art of record does not teach or suggest a WDM optical transmission system comprising a first optical supervisory signal generated by the optical supervisory-signal generation unit contains clock information as said information for use in determination of continuity of said optical transmission line. And said optical-supervisory-signal reception unit activates an APSD (Auto Power Shut Down) function based on the clock information,

wherein, even when the level of the second optical-supervisory-signal varies and an error occurs in the second optical-supervisory-signal, the APSD function is not activated as long as the clock information can be extracted from the first optical-supervisory-signal, and

wherein, only when said optical-supervisory-signal reception unit cannot extract the clock information from the first optical-supervisory-signal, said optical-supervisory-signal reception unit determines that a fiber failure has occurred, and activates the APSD function.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
